

PCA Chicago's autocross mission is to provide a safe and structured environment in which to promote the development and improvement of driving skills.

Autocross is a timed competition where drivers navigate through a temporary course created by traffic cones. Autocross places emphasis on car control, handling and driver skill rather than sheer horsepower. PCA Autocross has many classes which allow any model and vintage Porsche to compete with other Porsches exhibiting similar performance characteristics. The constant attention required for continuous precision turns, plus braking and accelerating, makes autocross one of the highest adrenaline motor sports you may ever attempt. At every event, we are treated to a unique course layout, with lap times in the 40-60 second range. Autocrossing is an economical introduction to learning skills such as acceleration, braking, turn in, and other precision vehicle control. Course designs are created for each event so drivers must learn a new course each time they compete. Prior to driving, a competitor should walk the course multiple times, take mental and written notes, and develop a strategy to be refined upon each run.
